Clifton Landry

Boston, MA | 774-420-4720 | cliftonlandryp@gmail.com | cliftonlandry.com

Full Stack Engineer with 2.5 years building multi-tenant enterprise level SaaS. From accessible Angular and React front ends to C#/.NET REST APIs, SQL Server and PostgreSQL databases, AWS services, and CI/CD pipelines.

Experience

Momentus | Remote | Event and venue management SaaS

Software Engineer (Promoted) April 2026 – October 2026

Stack: *C#, .NET, SQL Server, PostgreSQL, AWS (Lambda, ECR), Docker, Snowflake, Azure DevOps, xUnit, Datadog*

- Rebuilt the pull request check and Docker image pipelines in Azure DevOps (images published to AWS ECR), cutting backend checks from ~50 to ~10 minutes and front-end checks from ~30 to ~5 minutes
- Established an 80% line coverage standard with xUnit from the first commit of a new repository, enforced automatically through pull request checks
- Built C#/.NET REST APIs for tenant onboarding and offboarding, plus an AWS Lambda integration layer connecting three products (Standalone, Enterprise, and Elite), supporting customer onboarding across the US, Canada, EMEA, and APAC
- Designed tenant isolation rules covering tenant ID rulesets, database server and name allocation, and unique inbound email addresses per tenant
- Migrated email routing from SendGrid to Postmark for richer features and detailed logging, streaming email logs into Datadog for monitoring
- Designed the initial Snowflake data lake and mart layer, reducing backend calls and giving AI agents a single source of truth for account and contact history across the Enterprise and Elite apps

Associate Software Engineer April 2024 – April 2026

Stack: *TypeScript, Angular, C#, .NET, REST APIs, SQL Server, AWS Bedrock, SonarQube, Azure DevOps*

- Created and shipped a customer-facing AI agent on AWS Bedrock that turns manual entries into new events, writing its prompts and the C#/.NET REST endpoint that feeds it data
- Designed the agent to map ~20 event fields, prioritizing structured inputs before parsing open-ended notes for missing details and validating results (e.g., start date before end date)
- Migrated core front-end features of a large-scale enterprise event platform from Aurelia to Angular as part of a full UI modernization, building to WCAG 2.1 AA guidelines
- Designed an accessible split-screen workspace in Angular that keeps the main content on the left and stacked modals on the right, managed through tabs, with developers across teams
- Fixed keyboard accessibility in existing datagrid, dropdown, and modal components
- Built 8 SonarQube CI/CD pipelines from scratch for code quality and security scanning across repositories
- Led a technical spike for the Quick Quotes overhaul, breaking the work into scoped, estimated tickets

Tallan (acquired by EY, 2023) | Boston, MA

Software Development Intern May 2022 – August 2022

Stack: *Angular, TypeScript, C#, SQL, HTML*

- Built features for the Massachusetts Legislative CRM, a web app for communicating with constituents
- Designed and implemented the saved, subjects, and archive email tabs, and owned meeting invite functionality and the meeting service
- Translated user stories into UI improvements across several screens for a smoother user experience

Education

UNIVERSITY OF MASSACHUSETTS LOWELL | Lowell, MA September 2019 – May 2023

Bachelor's Degree in Computer Science with a minor in Mathematics | GPA – 3.37

Skills

Languages: TypeScript, JavaScript, C#, SQL, HTML, CSS, C++, C

Frameworks, backend, and data: Angular, React, .NET, REST APIs, SQL Server, PostgreSQL, Snowflake, Aurelia

Cloud, DevOps, and tools: AWS (Lambda, ECR, Bedrock), Docker, Azure DevOps, CI/CD, xUnit, SonarQube, Datadog, Postmark, Git, Figma
